

Keeping Greens green since 1996

Who: Whangaroa Golf Club

Where: Whangaroa, Far North

Products: 25,000L Promax Xpress Water Tank

Why: Whangaroa Golf Club is a picturesque 18-hole golf course situated in the idyllic Far North of New Zealand approximately at the midway point between Kerikeri and Kaitiaki. The club boasts mown fairways flanked by mature native and exotic trees and a creek winding through. The course is short but demanding and presents an interesting challenge for golfers at all handicap levels.

As any keen golfer will know, course maintenance is imperative to keep playing conditions ideal. So, when the Club discovered that their existing, aging concrete tank was beginning to fail they knew something had to be done.

Cracking and leaking is one of the most common complaints suffered by concrete tanks and is something the team at Promax encounter often. While concrete tanks can be repaired it can be very expensive and offers no guarantees that the same issue will not arise again.

What: The Course Committee engaged with Promax to discuss the issue and to look for a solution for their greens. We proposed the Promax Xpress 25,000L range to suit their needs. Backed with a no nonsense 20-year warranty, the Promax Xpress 25,000L is a solid cost-effective product that requires minimal maintenance.

The Committee selected Promax due to several reasons but the most significant being reputation, Promax's high level of service as well as delivering quality products.

For the Course Committee the whole process was painless from the initial inquiry to delivery. They were pleased to be kept well informed and were engaged with at every step throughout the process. They were delighted to receive the tank swiftly, which now stands proudly behind the 18th tee.

Promax keeping Greens green since 1996.
